

A diver is shown from behind, upside down, in a dark blue underwater environment. The diver's body is semi-transparent, revealing a white skeletal structure. The background is a dark, textured blue with some light patterns. The entire scene is framed by a thick blue border.

DANGEROUS GAMES

WHEN WE THINK OF GAMES
WE RARELY THINK OF THEM AS DANGEROUS

DANGEROUS GAMES

The Think First Foundation of Canada estimates that each year 40,000 Canadians sustain permanent brain or spinal cord injuries. Statistics show that the most frequent cause of these injuries are motor vehicle crashes, falls, sports, and recreation. These injuries are the leading cause of death for persons under the age of 34. Young people, ages 14 - 25 years account for one third of these injuries. The average age is 18 years, with males twice as likely to be injured as females.

Host **Amanda Bzdel** presents the stories of several people whose lives have been forever altered by careless mistakes, and presents ways in which people, young and old alike, can learn to be more careful.

Through re-creations and interviews, *Dangerous Games* presents the all-too-real drama behind brain and spinal cord injuries. With the intent to persuade teenagers that they are not invincible, the show aims to prevent mistakes before they happen.
